

Case Study: A & C College Canteen Management System

Scenario:

A & C College recently implemented a **Canteen Management System** to streamline food item management and ordering processes. The system is used by both administrators (canteen staff) and students.

- **Administrators** manage the food inventory, including adding new items, updating details, and deleting items when needed.
- **Students (Users)** can view the available menu and place orders.

The canteen wants to ensure smooth operations, minimize food waste, and offer a seamless ordering experience to students.
